

[www.albatrosshosting.com](http://www.albatrosshosting.com) | choosing a package

The first thing to keep in mind when choosing the package you need, is the size of your site. The average site usually comes to around 500k (0.5MB), however if you need to include lots of high quality images this will definitely be larger.

For most people the Light package would be enough. We would always suggest starting with the Light package and then upgrading if necessary later. With our hosting you have the facility to upgrade without losing any files, databases or emails.

More details:

1 MB – 1024K

- 1 megabyte = 1024 kilobytes

1GB – 1024MB

- 1 Gigabyte= 1024 megabytes

Calculate the webspace you need:

1. Average size of html pages (usually around 25-50k) x number of pages
2. Number of images x average image size
3. Desired email inbox size x number of email addresses

Add the above together and choose the closest package. Good luck with your web project!
